

## Omsoft Technologies & Tandem Properties DSL setup instructions for Linksys Routers:

Open a web browser and enter the address of the router in the address bar, typically <http://192.168.0.1>

Log in to the router with the administrative username and password. On the Internet setup screen, choose **Automatic Configuration – DHCP** for **Internet Connection Type**.

The screenshot shows the Linksys router's web interface. The top navigation bar includes 'Setup', 'Wireless', 'Security', 'Access Restrictions', and 'Applications & Gaming'. The 'Setup' menu is expanded to show 'Basic Setup', 'DDNS', 'MAC Address Clone', 'Advanced Routing', and 'VLANs'. The 'Internet Setup' section is active, showing 'Internet Connection Type' set to 'Automatic Configuration - DHCP'. Below this, there are fields for 'Router Name', 'Host Name', 'Domain Name', 'MTU' (set to 'Auto'), and 'Size' (set to '1500'). The 'Network Setup' section is also visible, showing 'Router IP' configuration with 'Local IP Address' set to '192.168.0.1', 'Subnet Mask' set to '255.255.255.0', and 'Gateway' set to '192.168.0.1'.

Now click **Save Settings**. The router will restart and be ready for use with a DHCP circuit.
